

Cold Weather Prep

TOURRIDER

1

Fluid Leaks & Levels

Pressurize engine and check for leaks. Verify coolant levels and wiper fluid are at appropriate levels & concentration for expected temperatures. Check holding tanks of water closet.

2

Functionality

Test defroster, heaters, auxiliary heater, tire chains, and windshield wipers and wiper fluid pump for proper functionality.

3

Condition & Corrosion

Look over windshield for chips and wipers for wear. Replace any clogged air / engine filters. Clean battery terminals and protect using anticorrosive spray.

4

Tires & Exterior

Replace valve stem covers on tires and adjust pressure to appropriate levels. Ensure doors/flaps are in good working order (latch/unlatch).

5

Emergency Equipment

Check spare tire and emergency road side kit is ready in case of emergency. Inspect fire extinguisher and that it up to date.
